ScreenSort

A Movie Recommendation Database System

Welcome to ScreenSort!

ScreenSort is a powerful movie recommendation API designed to provide users with personalised film suggestions tailored to their unique tastes. Whether you're a casual viewer or a cinephile, ScreenSort leverages advanced algorithms and data-driven insights to sort through thousands of titles and present curated recommendations based on your viewing history, preferences, and current trends. Seamlessly integrate ScreenSort into your app, website, or service to enhance user experience with dynamic, real-time movie suggestions that cater to every mood and genre.

Discover your next favorite movie with ScreenSort.

ScreenSort

A Movie Recommendation Database System

Would you recommend this movie?

This screen would be an overlay over the finished/paused movie player in a minimised window, embedded in the app/site. Users can either click thumbs up or down to say if they would recommend this movie. This would feed back into the algorithm to not recommend movies like this in the future.
